

# Procyon Lotor Pizza Problems

The school cafeteria is a mess. Overnight a family of racoons broke in through a window that was left slightly open. The racoons opened all of the cabinets and emptied all of the food onto the floor. They ate as much of the food as they could. The food they did not eat was still opened and contaminated so none of it can be served.

Today the cafeteria is going to get pizza from Little Caesars to feed the students. Each student in kindergarten and first grade will be served 1 piece of pizza. Students in second and third grade will be served two pieces of pizza. Students in 4th and 5th grade will be served 3 pieces of pizza.

If each pizza has 8 slices. How many whole pizzas will they need to order to feed all of the students? Use the chart below to help you solve this problem.

<b>Grade Level</b>	<b>Number of Students</b>
KINDER	88
FIRST	100
SECOND	102
THIRD	112
FOURTH	98
FIFTH	106
